Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The **frame** house is a two-story frame structure constructed in a rectangular plan. It contains its original exterior wood siding and many of its early ornamental features including a full-length, one-story porch bracket cornice and window trim with crossettes, pointed-arch cornices, and round-arch upper pane sash. The retention of these features makes the structure one of the better preserved buildings in Sandy Hook. The structure appears to date from the mid-to-late 19th century.

The property is located in the north **east** corner of the intersection of Sandy Hook and Clark Road, in Sandy Hook. The structure sits back from the road and is centrally located on its lot. The main facade faces south.

The two-story structure is constructed of frame covered in aluminum siding. The house is constructed on a fieldstone foundation. The structure is currently painted white with trim painted in a dark color. In sections of the house, these contrasting colors enhance the pattern of ornamentation, such as the bracket cornice (where the background is painted dark and the bracket white), the window trim (where the architraves are painted dark and the window sash white), and the porch (where the alternating white and dark colors are used). The main facade is symmetrically arranged with a central entrance and a full-length, one-story porch. Two-over-two sash windows are in the outer bays of the first story, three bays of the second story, and one on each story of the gable ends. The gable ends also have a small window in the gable. The front porch has a hipped roof supported on square posts. Panel ornamentation is located on the railing. The structure has cornerboards painted in a dark color. There is a gable roof covered in asphalt shingles.

There are no significant outbuildings on the property.
